Agenda

CSS Basics
Selectors

CSS - POSITION

Positioning is controlled mainly by using the **position property**, which can have the following values:

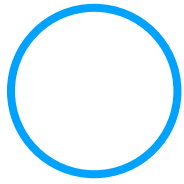

Position: static

Position: relative

Position: absolute

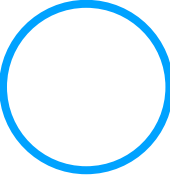

Position: fixed

Position: sticky

CSS – POSITION

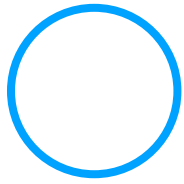

DEMO-1

CSS3 - 2D TRANSFORMS

2D transforms are used to re-change the element structure as translate, rotate, and skew.

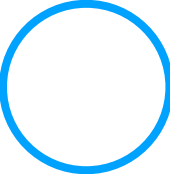

Sr. No.	Value & Description
8	rotate(angle) Used to rotate the element based on an angle
9	Skew X(angle) Used to defines skew transforms along with x axis
10	skewY(angle) Used to defines skew transforms along with y axis

CSS3 - 2D TRANSFORMS
