Web Design and Development I

Mohammad Zafar Shafaq

Agenda

• HTML Basics

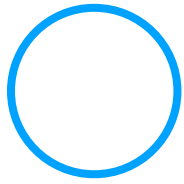

• Tags

• Page Structure

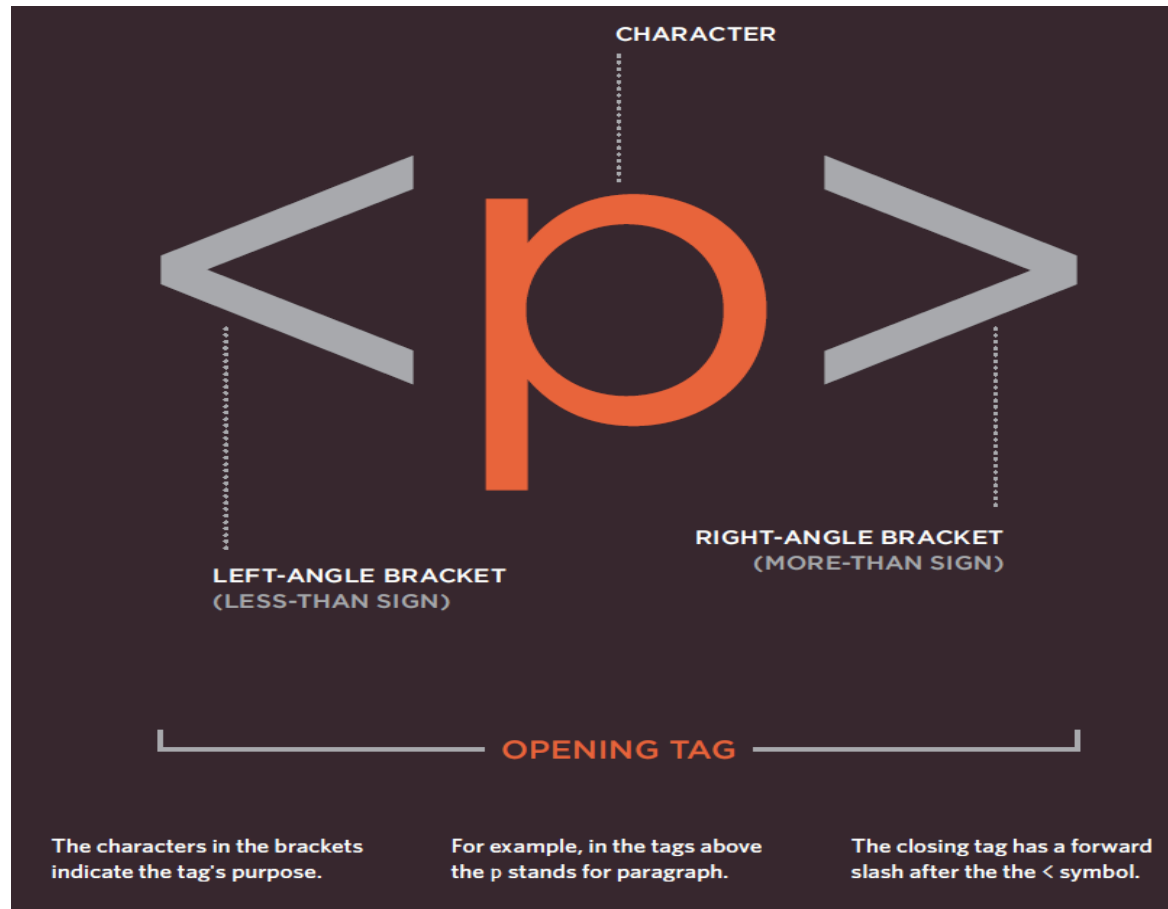

STRUCTURE OF THE PAGE

- **HTML** is used to create the structure of the page
 - A web page contain the following sections:
 - **Head section:** it gives commands to the body section
 - **Body section:** display the contents on the screen
- 
- 

TAGS

Tags act like containers. They tell you something about the information that lies between their opening and closing tags.

CLOSING TAGS

HTML ELEMENTS

➤ HTML Uses element to Describe the Structure of Pages

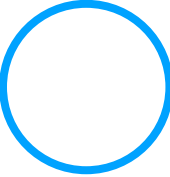

- There are several different elements.
- Most of the elements has an opening tag and a closing tag.
- Some of the elements has only opening tags.

```
<html>
<head><title> HTML Structure</title></head>
<body>
<h1>This is the Main Heading</h1><br><hr>
<p>This text might be an introduction to the rest of
the page.<p>
<h2>Another Sub-Heading</h2>
</body>
</html>
```

PAGE STRUCTURE

DEMO-1

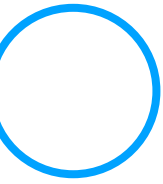

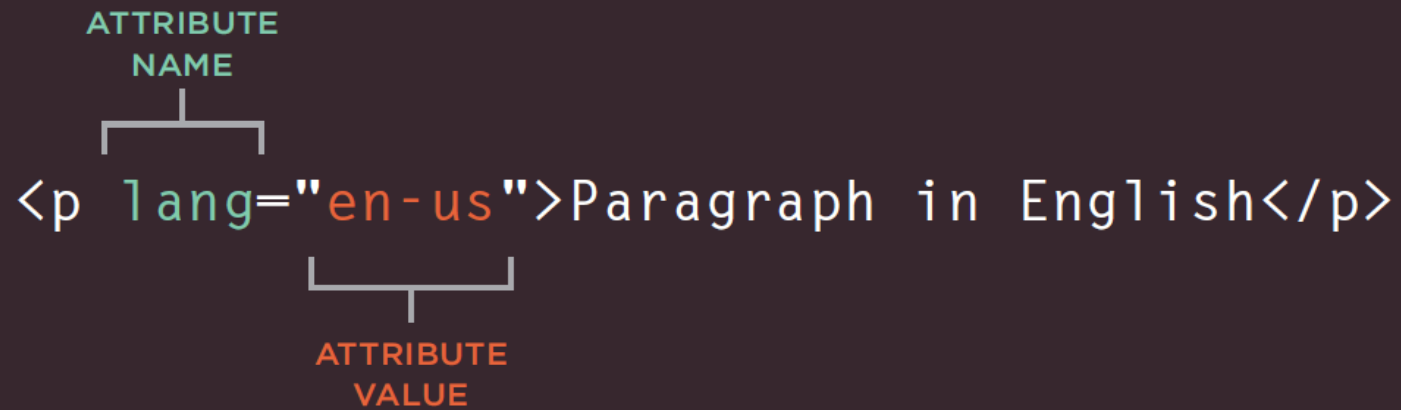

ATTRIBUTES

- 
- Attributes provide additional information about the contents of an element.
 - They appear on the opening tag of the element
 - and are made up of two parts:
 - a name and a value, separated by an equals sign.
- 

ATTRIBUTES CONT....

The attribute **name** indicates what kind of extra information you are supplying about the element's content. It should be written in lowercase.

The **value** is the information or setting for the attribute. It should be placed in double quotes. Different attributes can have different values.

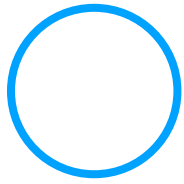

Here an attribute called `lang` is used to indicate the language used in this element. The value of this attribute on this page specifies it is in US English.

CORE ATTRIBUTES

The four core attributes that can be used on the majority of HTML elements

- Id
 - Title
 - Class
 - Style
- 
- 

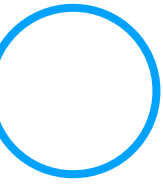

INTERNATIONALIZATION ATTRIBUTES

which are available for most (although not all) HTML elements.

➤ dir

➤ lang

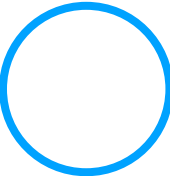

ATTRIBUTES

DEMO-2

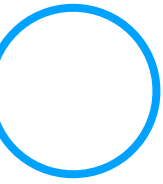

SUMMARY

- HTML pages are text documents.
- HTML uses tags (characters that sit inside angled brackets) to give the information they surround special meaning.
- Tags are often referred to as elements.
- Tags usually come in pairs. The opening tag denotes the start of a piece of content; the closing tag denotes the end.
- Opening tags can carry attributes, which tell us more about the content of that element.
- Attributes require a name and a value.
- To learn HTML you need to know what tags are available for you to use, what they do, and where they can go.
