CSS – BACKGROUNDS

DEMO-1

CSS – FONTS

Here you will learn how to set fonts of a content, available in an HTML element. You can set following font properties of an element –

The **font-family** property is used to change the face of a font.

The **font-style** property is used to make a font italic or oblique.

The **font-variant** property is used to create a small-caps effect.

The **font-weight** property is used to increase or decrease how bold or light a font appears.

The **font-size** property is used to increase or decrease the size of a font.

The **font** property is used as shorthand to specify a number of other font properties.
